“Offering Business and Technical Solutions”

Presents another course in their technical series

‘Fuel Trim Diagnostics’

Automotive Technical Workshop

Get a ‘handle’ on how Engine Fuel Management components operate and interact!

Understand Engine Management Fuel and Air issues, typical failures and be ready to take advantage of the increasing number of these failures on today’s vehicle population ...!

This is a 2 evening seminar written and taught by David DeCoursey!

First Evening includes Dinner Plus:

- What is Fuel Trim?? How does it affect drivability?
- What components are involved in these systems and how they are tested?
- What is ‘LAMBDA’ and why should you use it for Fuel Trim diagnostics?
- What common issues create lean and rich conditions?

Second Evening includes Dinner Plus:

- Diagnostic Procedures when there is an Air/Fuel issue!
- Which sensors are involved and how to test them!
- How does the Engine Management System adjust for different air/fuel conditions?
- Case Studies of multiple service situations covering Air/Fuel issues!
