User Guide added

- MITSUBISHI Reminder reset

MITSUBISHI Reminder reset

[Caution]

If the instrument cluster (also known as 'combination meter') needs to be replaced, current mileage and elapsed days must be correctly entered into the cluster after the replacement in order to be used for service reminder function. Therefore, read "Integrated mileage for reminder," "Integrated days for reminder," "Mileage until Extra reminder," "Months until Extra reminder," and "Current schedule" from the cluster prior to replacement using the special function of G-scan2, and record them.

After the service reminder function has started, when the elapsed days for check warning is reset for the vehicle whose battery is removed for a long period (15 days +), calculate the elapsed days from the delivery date to the customer (start date of service reminder function) and the current date, and then input the data.

[How to perform using G-scan2]

** Prior to setting, if the cluster does not start measuring the elapsed time, turn the IG switch to ON position while pressing the cluster information switch to start measurement.

1. Connect G-scan2 to the OBD2 Port

Applicable device : G-scan2, G-scanTab

- TOYOTA Part Exchange (MMT Clutch Replacement)

Parts Exchange (MMT Clutch Replacement)

*General Information.

- MMT is Multi-Mode Transmission and offered by Toyota.
- Whether a car is fitted with MMT or not can be identified by checking if the gear selector has no Park (P) position as below.

* Important Information.

- The calibration values and the DTC stored information will not be cleared even when the negative terminal of the battery is removed.

Applicable device : G-scan2

- MITSUBISHI Reminder reset

MITSUBISHI Reminder reset

[Caution]
If the instrument cluster (also known as 'combination meter') needs to be replaced, current mileage and elapsed days must be correctly entered into the cluster after the replacement in order to be used for service reminder function. Therefore, read "Integrated mileage for reminder," "Integrated days for reminder," "Mileage until Extra reminder," "Months until Extra reminder," and "Current schedule" from the cluster prior to replacement using the special function of G-scan2, and record them.

After the service reminder function has started, when the elapsed days for check warning is reset for the vehicle whose battery is removed for a long period (15 days +), calculate the elapsed days from the delivery date to the customer (start date of service reminder function) and the current date, and then input the data.

[How to perform using G-scan2]
** Prior to setting, if the cluster does not start measuring the elapsed time, turn the IG switch to ON position while pressing the cluster information switch to start measurement.

1. Connect G-scan2 to the OBD2 Port

Applicable device : G-scan2, G-scanTab

- TOYOTA Part Exchange (MMT Clutch Replacement)

Parts Exchange (MMT Clutch Replacement)

***General Information.**
- MMT is Multi-Mode Transmission and offered by Toyota.
- Whether a car is fitted with MMT or not can be identified by checking if the gear selector has no Park (P) position as below.

*** Important Information.**
- The calibration values and the DTC stored information will not be cleared even when the negative terminal of the battery is removed.

Applicable device : G-scan2
