Press Release

CAS announces major release for the G-scan family of scan tools!

Easton, Massachusetts January 28th, 2021

The company (CAS) has announced today that E-ZDS the software developer for G-scan, has just released the next major software update for the G-scan family of scan tools.

CAS President and CEO, John Jenkins commenting on this first major release of 2021; "It's great to see the amount of new coverages introduced with this release. Jaguar and Land Rover were extended quite a bit as were the Chrysler/Jeep/Dodge vehicle lines"

"I am also excited to see the release of an ever increasing number of ADAS calibration capabilities as E-ZDS is adding a number of 2020 vehicles. In the past, repair shops could wait 2-3 model years for coverage to arrive. Now with ADAS services, a number of our customers are demanding more current vehicle coverage. E-ZDS has been addressing this situation with their software development"

It was also noted E-ZDS has security access capabilities for both the FCA vehicle line as well as Hyundai and Kia making the Gscan-3 and Gscan-2 the only known non-OEM scan tools to offer this OEM authorized dual security access capability.

The newly added vehicle coverages include a large amount of 2020 model year vehicles, multiple Mercedes Benz models, 2018-2020 Fiat Chrysler and 20+ other car lines. Expansion areas include Diagnostics, Maintenance Functions and ADAS calibrations. Also made available is a multi-page 'What's New' PDF file for downloading from the CAS website; <https://oemtools.com/multi-line-scanners/>.

Customers under a current subscription are encouraged to update their G-scan immediately to take advantage of all the latest additions and enhancements. G-scan owners wishing to purchase a subscription are encouraged to call their CAS representative.

For Release: January 28, 2021
