

Hyundai KIA - PIN Code Reading

What is PIN Code Reading?

To make a new key for old car, conventional way was to generate a PIN code by calculating VIN. But, Hyundai KIA have applied a new type of PIN code structure.

These PIN Codes are not "calculated", a random combination of numbers is generated and it is stored in somewhere of ECU memory sector.

We have been researching many ECUs to figure out the way to get the PIN code data. As a result, we have developed "PIN Code Reading" feature available for Zenith tools.

To use the PIN Code Reading function for those vehicles, it requires **an internet connection** and **a valid update subscription** as the most of latest vehicles.

Supported model List

Since January 2023 update applies to Zenith Z5, PIN Code reading function for Smart Key module has been available for the following Models. (Coverage will be expanded through future updates.)
